Leytus, S.P., Chung, D.W., Kisiel, W., Kurachi, K. and Davie, E.W. Characterization of a cDNA coding for human factor x

Proc. Natl. Acad. Sci. U.S.A. 81 (12, 3699-3702 (1984)
                                                                                                                                                                                                                                                                                                                                                                                                                                                         In processing, factor X (Stuart factor) is converted to Xa by cleavage of a glycopeptide from the amino-terminal end of the heavy chain. It then acts as a serine protease in converting prothrombin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human liver, cDNA to mRNA, clone Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                    ç

                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Reverse transcription of tissue mRNA and cDNA amplification were performed under low stringency conditions.*

Library is oligo-dT primed and directionally cloned (EcoRV site is destroyed upon cioning). Average insert size 2.1 kb, insert size range 1-3.5 kb. Library is normalized and enriched for full-length clones and was constructed by C. Gruber (Invitrogen). Research Genetics tracking code 036.
